# Methodology & Disclosures

- Source: public buyback filings ("Información de recompra") published by Bolsa Mexicana de Valores for every issuer, collected automatically each business day. Closing prices: Yahoo Finance.
- Net buybacks = amount bought − amount sold by each issuer's buyback fund, in MXN, by trade date.
- Buyback yield = net shares bought back / outstanding shares reported in the issuer's latest filing. Sector yield = sector net buybacks / sector market value (outstanding shares × close at the cut-off date).
- Sector classification: data/sectores.csv (editable). Periods that start before the full-market data coverage are shown as n.d. rather than as partial figures.

## Disclosures

This document is for informational purposes only and does not constitute an offer, recommendation or solicitation to buy or sell any security. Figures are compiled from public filings and third-party prices that may contain errors or omissions; no guarantee is given as to their accuracy or completeness.
